SUMMARY

Final year B.Tech CSE student (CGPA 9.11) specializing in AI/ML and intelligent systems. Experienced in building RAG-based applications and scalable solutions with strong foundations in DSA and system design.

SKILLS

Programming Languages: C, Java, Python
Frameworks & Libraries: Next.js, React, Express, TensorFlow, NumPy, Tailwind CSS, Asternity
Tools & Platforms: Git, VS Code, PyCharm, IntelliJ IDEA, Jupyter Notebook
AI/ML and Data Science: Machine Learning, Deep Learning, NLP, Generative AI, LLMs
Core Competencies: Data Structures, Algorithms, OOP, DBMS, Software Engineering, Project Management

PROJECTS

- MIRAI: Autonomous AI Combat System | Python, FastAPI, FAISS, Ollama, Next.js

GitHub

 - Engineered a memory-augmented AI combat system inspired by NVIDIA ACE using FAISS vector retrieval and behavioral profiling.
 - Integrated N-gram prediction, heuristic strategy engines, and emotional state modeling for adaptive combat behavior.
 - Designed a resource-aware combat engine with stamina, posture, parry, and stagger mechanics for dynamic AI interactions.
 - Connected Ollama with Llama 3.2 and architected a Next.js dashboard interface for adaptive dialogue and combat telemetry visualization.
- Quant Agent: Multi-Agent Trading System | Python, LangGraph, LangChain, Flask

GitHub

 - Developed a multi-agent AI trading platform using LangGraph for automated market analysis and decision orchestration.
 - Integrated technical indicators including RSI, MACD, and Bollinger Bands, improving trend prediction accuracy by 30%.
 - Utilized LLMs such as GPT-4o, Claude, and Qwen for context-aware trade analysis, reducing false signals by 25%.
 - Engineered scalable Flask APIs for real-time data processing, model inference, and inter-agent communication.
- PickItUp: Hyperlocal Shop Reservation Platform | Next.js, React.js, MongoDB

GitHub (In Progress)

 - Created a hyperlocal reservation platform with GPS-based shop discovery using Geolocation API and MongoDB geospatial queries.
 - Implemented scalable modules for inventory management, merchant dashboards, reservations, and OTP-based pickup verification.
 - Optimized MongoDB aggregation pipelines with MongoDB 2dsphere indexing for efficient real-time radius search and high-performance API responses.

EDUCATION

KIIT UNIVERSITY

2023 - 2027

B.Tech in Computer Science and Engineering

CGPA: 9.11

Relevant Coursework: Object-Oriented Programming, Databases, Discrete Mathematics, Data Structures, Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining

OTHER EXPERIENCE

SwasthyaPro

Jul 2025 – Sep 2025

Digital Marketing Intern (Remote)

- Improved organic search visibility and analyzed 1000+ monthly traffic insights using Google Analytics and SEMrush to optimize SEO performance.

ACHIEVEMENTS & CERTIFICATIONS

- Completed AWS Cloud Architecting and Data Science, AI/ML & Generative AI Specialization.
- Solved 200+ DSA problems and secured 1st Runner-Up at KIIT Hackathon for building the UiPath Resume Screener.
